

💰 Budget Allocation Helper

A simple and interactive web tool that helps users divide a total budget into different categories based on percentages. The tool dynamically calculates the amount allotted to each category and helps in efficient financial planning.

🎯 Features

- Enter a total budget amount
- Add unlimited custom categories
- Assign percentage values to each category
- Automatic calculation of funds per category
- Remove categories instantly
- Error alert if percentages do not sum to 100%
- Clean, attractive, responsive UI

🔧 Tech Stack

Technology	Purpose
HTML	Structure of the web page
CSS	UI styling and layout design
JavaScript	Calculations & dynamic category handling

🚀 Project Objectives

- Help users plan financial budgets efficiently
- Automate calculations to avoid manual mistakes
- Provide an intuitive and user-friendly experience
- Allow dynamic category customization

👤 Contributors / Team Members

Name	Roll Number
O. Bhanu Teja	2403A51086
K. Prekshajna	2403A51087
M. Varshitha	2403A51088

🛠️ AI Tools Used

Tool	Purpose
ChatGPT	Code debugging & UI improvements
Canva AI / PowerPoint Designer	PPT design

🚀 Future Enhancements

- Export report as PDF
- Pie-chart visualization of budget distribution
- Save budgets locally or to cloud
- Dark mode support

🏁 Getting Started

Just open `index.html` in any browser --- no installation required.
